

LEGEND

- SPECIAL FLOOD HAZARD AREAS INUNDATED BY 100-YEAR FLOOD
- ZONE A** No base flood elevations determined
- ZONE AE** Base flood elevations determined
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined
- ZONE AD** Flood depths of 1 to 3 feet (usually shown flow on sloping terrain); average depths are estimated for areas of abraded (or flooding without flow determined)
- ZONE A99** To be protected from 100-year flood by Federal flood protection system under construction; no base flood elevations determined
- ZONE V** Coastal flood with velocity hazard (mean action); no base flood elevations determined
- ZONE VE** Coastal flood with velocity hazard (mean action); base flood elevations determined
- FLOODWAY AREAS IN ZONE AE
- OTHER FLOOD AREAS
- ZONE X** Areas of 100-year flood, areas of 100-year flood with average depths of less than 1 foot and areas protected by levees from 100-year flood
- OTHER AREAS
- ZONE D** Areas in which flood hazards are under study
- UNDEVELOPED COASTAL BARRIERS
- Floodplain Boundary
- Floodway Boundary
- Zone D Boundary
- Boundary Dividing Special Flood Hazard Zones and Boundary Dividing Areas of Different Coastal Bar Flood Elevations Within Special Flood Hazard Zones
- Base Flood Elevation Line, Elevation in Feet (ICL 1987)
- Cross Section Line, Elevation in Feet (ICL 1987)
- Base Flood Elevation in Feet Where Uniform Within Zone*
- Elevation Reference Mark
- Zone Mark

*Referenced to the National Geodetic Vertical Datum of 1985

NOTES

This map is for use in administering the National Flood Insurance Program; it does not normally identify all areas subject to flooding, including those from local drainage sources of small size, or all pertinent features outside Special Flood Hazard Areas. The community map repository should be consulted for possible updated flood hazard information prior to use of this map for property purchase or construction purposes.

Coastal base flood elevations apply only for landward of 800 feet, and include the effects of wave action; these elevations may also differ significantly from those developed by the National Weather Service for hurricane evacuation planning. Areas of special flood hazard (100-year floods) include Zones A, AE, AH, AD, A99, V, and VE.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the Floodways were computed at cross sections and interpolated between cross sections. The Floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency. Floodway widths in some areas may be too narrow to show to scale. Floodway widths are provided in the Flood Insurance Study Report.

Elevation reference marks are described in the Flood Insurance Study Report. For acquiring map panels see separately printed Map Index.
